

# Tuto Spacy Word Embedding

1. Word vectors occupy lot of space. hence en\_core\_web\_sm model do not have them included. In order to download word vectors you need to install large or medium english model. We will install the large one! make sure you have run "python -m spacy download en\_core\_web\_lg" to install large english model or nlp = spacy.load("en\_core\_web\_md") for large model
2. print token of the sentence: Bahi takes a lunch at STGI.
3. Check if the tokens have vectors and if they are Out Of Vocabulary or not
4. Compute the vectors shape.
5. Define the word: "meal" as a fixed base token and check its shape vector.
6. Compute the similarities between "meal" and all tokens of the doc object
7. Define a function that print the similiraties between each word of sentence 1 and sentence 2  
sentence 1: Bahi takes a lunch at STGI  
sentence 2 : Bahi takes a lunch at home
8. give the results
9. Compute the similarities betwee "iphone" and the words of "apple samsung iphone dog kitten"
10. Print the vectors of  
king  
man  
woman  
queen
11. Compute king-man+woman
12. Compute the cosine similarity between "king - man + woman" and "queen"
